Q: What could cause the following error message? Attempting to add a custom action to a deployed module, I get this error message. I just started working on my first module and I'm lost as to what could be causing the problem. Warning: Invalid argument supplied for foreach() in /var/www/vhosts/smustangost.co.uk/httpdocs/sites/all/modules/custom/custom.module on line 986 Warning: Invalid argument supplied for foreach() in /var/www/vhosts/smustangost.co.uk/httpdocs/sites/all/modules/custom/custom.module on line 987 Warning: Invalid argument supplied for foreach() in /var/www/vhosts/smustangost.co.uk/httpdocs/sites/all/modules/custom/custom.module on line 988 custom.module/* * Implements hook_menu_alter(). */ function custom_menu_alter(&Sitem) { \$items['custom-step-selector']['weight'] = 10; } modules.php * Implements hook_module_implements_alter(). function custom_module_implements_alter(&Implementations, \$hook) { if ('custom_menu_alter' == \$hook) { \$implementations['custom/custom'] = array('title' => t('Custom')); } The first warning message says "Invalid argument supplied for foreach()" so I've checked my code, and here's what I see: "Line 986 of custom.module" seems to be in the foreach loop. I've checked the foreach loop at line 986 and it's fine - I've got something like this: foreach (\$items as \$key => \$item) { I've checked all my code and can't find anything wrong. Could you tell me why this is happening. 82157476af
